Objective

M.Tech Data Science and AI student applying strong programming skills and statistical learning to build reliable ML solutions, analyse engineering data and support data-driven product decisions through rigorous experimentation and clear technical documentation

Experience

- **Keyvalue Software Systems** 15/07/2021 - 04/05/2024
  Test Engineer

  •Validated EdTech web and FinTech mobile applications through functional/regression/sanity and cross-browser testing; produced clear test plans, cases, and reports with defect tracking in Jira.

  •Automated API validations using Postman and Jest (JSON request/response checks), improving repeatability and speeding up verification.

  •Performed load testing with JMeter, analyzing latency/throughput/error trends to baseline performance and flag bottlenecks.

  •Used Git (basic) and worked in cloud-hosted setups with AWS fundamentals, collaborating effectively in iterative release cycles.

Education

- **Indian Institute of Technology, Tirupati** 2025-2027
  M.Tech Data Science and AI
  9.29
- **Govt Engineering College, Barton Hill, Trivandrum, Kerala** 2017-2021
  B.Tech Electronics and Communication
  9.22
- **Rahmaniyya Higher Secondary School, Kozhikode, Kerala** 2015-2017
  Plus Two (HSE)
  97.9%
- **Technical Higher Secondary School, Vazhakkad, Malappuram,Kerala** 2015
  SSLC
  97.5%

Skills

- Programming : C++, Python(Pandas, Numpy, OpenCV) ,Pytorch, Scikit-learn
- Data and Statistics: SQL, Statistical methods
- Visualization: Matplotlib, Seaborn, MS Power BI
- Others: EDA, LLM, GAN, Linux, AWS, Git

Projects

- **DQN model for Humanoid locomotion form Image defined initial pose**
  To develop and end-to-end pipeline that enables a simulated humanoid agent to learn stable walking using Deep Reinforcement Learning
- **Geospatial deep learning for land classification**
  Implemented a Pytorch ResNET 18 transfer learning model to classify satellite imagery using ESA WorldCover data achieving ~93% accuracy.
